

DID YOU KNOW?

- The #1 risk factor for breast cancer is being female.
- The older a woman gets, the more she needs to get a mammogram. 2/3rds of all breast cancer is diagnosed in women over the age of 50.
- When breast cancer is detected early, the chance of successful treatment is greatest.
- More women trust their breast health to Kettering Breast Evaluation Centers (KBEC) than any other breast imaging service in the area.

WHY KETTERING BREAST EVALUATION CENTERS?

Kettering Breast Evaluation Center has been the area leader in breast imaging since opening in 1985, and is a unit of the Women's and Children's Services of the Kettering Health Network. We perform over 40,000 breast procedures each year.

Services provided include:

- Screening & Diagnostic Mammograms
- Breast Ultrasound
- Radiologist Second Opinions
- DEXA Scan Bone Densitometry – at our Franklin and Miamisburg Location
- Stereotactic Breast Biopsies
- Ultrasound-guided Breast Biopsies
- Breast MRI

 - Member of the National Consortium of Breast Centers
 - Certified Participant in the National Quality Measures for Breast Centers™

AMERICAN CANCER SOCIETY GUIDELINES FOR EARLY DETECTION OF BREAST ABNORMALITIES

Yearly Mammogram – The American Cancer Society recommends that women aged 40 and older should have a mammogram every year. If you are under age 40 and have a family history of breast cancer or other concerns about your risk, talk with your doctor about when to begin mammography.

Annual Health Care Provider Exam – If you are 40 or older, have a clinical breast exam by your doctor every year. If you are between ages 20 and 39, have a clinical breast exam every three years.

Regular Breast Self-Examination – preferably monthly if you are aged 20 or older. Become familiar with the normal look and feel of your breasts and let your doctor know if you notice any changes.
